***Election/Restrictions***

**DETAILED ACTION**

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-43 and 55-60, drawn to a switching system that utilizes common time reference, periodic super cycles, time frames along with control information for switching data via a multiple inputs and outputs, classified in class 370, subclass, 389-396.
  - II. Claims 44-54 drawn to a communication system that consist of multiple subsystems wherein each subsystem forms a node in a fractional lambda pipe, whereby data is routed with respect to fractional lambda pipe and pipe merge node, classified in class 385, subclass 15.
1. Because these inventions are distinct for the reasons given above and the search required for Groups II is not required for Group I and visa versa, restriction for examination purposes as indicated is proper.
2. During a telephone conversation with David Sitrick on April 28 a provisional election was made with traverse to prosecute the invention of Group I, claims 1-43 and 55-60. Affirmation of this election must be made by Applicant in replying to this Office action. Claims 44-54 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Inventions Group I and Group III are related as combination and subcombinations. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombinations as claimed for patentability, and (2) that the subcombinations has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because a communication system that consist of multiple subsystems wherein each subsystem forms a node in a fractional lambda pipe, whereby data is routed with respect to fractional lambda pipe and pipe merge node, is not needed for a switching system that utilizes common time reference, periodic super cycles, time frames along with control information for switching data.

#### ***Reasons for Allowance***

1. Claims 1-43 and 55-60 are allowed over prior art.
2. The following is an examiner's statement of reasons for allowance: The prior art fail to teach or suggest switching systems that comprise of multiple inputs and outputs with addressable assignment, selected one of outgoing channels of a second communication channel is responsive to CTR and associated with common time reference (CTR) that is divided into super cycles, and time frame that has associated at least header control data and trailer control data, control data for providing an aligned output that is aligned to the CTR, and CTR is divided into multiple neighboring periodic super cycles wherein each is consist of at least one neighboring time cycle.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
